

# Synopsis

Yangyang Xu, u6325688, ANU, setting/location

Client:

**Wayfinder App**

<http://www.designnetworknorth.org/news/opportunities/wayfinder-app-tender/>

SFIA:

Hello, my name is Yangyang Xu, my student ID is U6325688. The Wayfinder App developer is the tender I am applying for. This is an opportunity of developing an App for the Great Exhibition of North 2018 Event. If my development team get chosen, this app will bring us 100,000 of visitors.

It is honoured having such potential chance to develop an App that assistants the visitors who attend in the Great Exhibition of North 2018 Event. As a member of our development group, I believe that my technical proficiency in 4 terms defined in the SFIA, which are Autonomy, Influence, Complexity, and Business Skills that can satisfy with the your requirements, also benefit and push the progress to accomplishing the App on time and efficiently.

For the autonomy; I have plenty of experiences on participating building project and did my work individually. Design Thinking and Agile are the two techniques I often used. Planning ahead is always good for starting a project. ....said.....Thus, the Design Thinking I used to help me stick on the prototype, define the problems as peoples' needs, add more solutions based on the problems, test if the prototype can be really helpful and make it be empathetically thoughtful. Under the Agile architecture, my work had been distributed according to my strength, and I always get my work finished on time. <add Fact details>

For the influence; Sometimes, my group members ask me for advices on programs, there is a trust bond between me and my development team. I have open mind, when there is any disagreement, my team group would also talk about it straight away, as long as we sort out of the most appropriate option for good.

For the complexity of code techniques, I am able to use Java, C++, Python, C#, Javascript, PHP, Matlab to make either Mobile or Web App. For the complexity of work environment, I have experiences on working alone and working with few development members. My clients were the Queensland government and two professors of UQ. Among my old experiences, I think Agile is suitable for my 7-people team, it is also good to manage the budget will never go over £100,000. As .... states:.....

For the Business Skill; I am always a good listener, also a talker. I would like to learn new things from anyone to help me improve my software programs. I would not leak any information about our private part on further Contract. I will also comply with rules on the contract.

Thank you for your time and consideration, hopefully, my team and you will be able to bring a good memory of the Exhibition tour for your visitors and business partners.
